

## Report

Name:

ID:

### Second Scene

*scene\_2*

After clicking “Calculate” button, second scene will appear where calculated cgpa will be shown.

```
btnCalculate.setOnAction(new EventHandler<ActionEvent>() {  
    @Override  
    public void handle(ActionEvent arg0) {  
        // scene_2  
    }  
})
```

### Name & ID

```
String rStrName = tfName.getText().toString();  
String rStrID = tfID.getText().toString();
```

Storing “Name” & “ID” text field data to “rStrName” & “rStrID” String variables.

Writing user data to a file

```
File rFile = new File("data.txt");  
try {  
    rFile.createNewFile();  
} catch (IOException e) {  
    e.printStackTrace();
```

```

}

FileWriter rFw;
try {
    rFw = new FileWriter("data.txt");
    rFw.write("\"" + rStrName + "\" " + rStrID + "\n");

    for(int i=0; i<strInfo.length; i++){
        rFw.write("\"" + strInfo[i][0] + "\" " + strInfo[i][1] + " " + strInfo[i][2] + "\n");
    }

    rFw.close();

} catch (IOException e) {
    e.printStackTrace();
}

```

This part writes user input data from first scene to a file “data.txt”. First, a File Object called “rFile” get intialized with “data.txt” argument. Then rFile.createNewFile() will create a new file. A FileWriter Object “rFw” will write to the “data.txt” file. rFw.write() method is used for writing in a file. Above code will write name and ID in the first line. Each course name, credit, grade will be written in a new line.

### **CGPA Calculation**

```

Double[] rGPA = new Double[5];
Double rCGPA = 0.0;
Double rTotalCredit = 0.0;

```

```

for(int i=0; i<strInfo.length; i++){
    if(strInfo[i][2].equals("A")){
        rGPA[i] = 4.0;
    }else if(strInfo[i][2].equals("A-")){
        rGPA[i] = 3.7;
    }else if(strInfo[i][2].equals("B+")){
        rGPA[i] = 3.3;
    }else if(strInfo[i][2].equals("B")){
        rGPA[i] = 3.0;
    }else if(strInfo[i][2].equals("B-")){
        rGPA[i] = 2.7;
    }else if(strInfo[i][2].equals("C+")){
        rGPA[i] = 2.3;
    }else if(strInfo[i][2].equals("C")){
        rGPA[i] = 2.0;
    }else if(strInfo[i][2].equals("C-")){
        rGPA[i] = 1.7;
    }else if(strInfo[i][2].equals("D+")){
        rGPA[i] = 1.3;
    }
}

```

```

    }else if(strInfo[i][2].equals("D")){
        rGPA[i] = 1.0;
    }else if(strInfo[i][2].equals("F")){
        rGPA[i] = 0.0;
    }

    rTotalCredit += Double.parseDouble(strInfo[i][1]);
    rCGPA += Double.parseDouble(strInfo[i][1]) * rGPA[i];
}

rCGPA = rCGPA/rTotalCredit;

```

This code snippet calculates CGPA. First we take a Double type array “rGPA” of size 5 for storing GPA for each course and two Double variable “rCGPA” and “rTotalCredit” initialized with 0.0. In a for loop GPA for each course will be determined by corresponding grades. “strInfo” is a 2D array of size 5x3. First index is for each course information and The value of the second index 0, 1, 2 indicates the name of the course, credit and grade. CPGA will be calculated with this formula:  $CGPA = (\text{Sum of every credit} * \text{corresponding gpa}) / \text{Total Credit}$ .

## Scene Header Layout

## Scene Header

```

// ui
Label rLabelHeader = new Label("CGPA Calculator");

// layouts
HBox rHboxHeader = new HBox(HBOX_GAP, rLabelHeader);
rHboxHeader.setAlignment(Pos.CENTER);

```

A Label object “rLabelHeader” is initialized with text argument “CGPA Calculator”. It is added to a HBox layout called rHboxHeader with a gap between each label HBOX\_GAP which is 30.

“CGPA Calculator” label will be centered in the layout using `setAlignment` method with the argument `Pos.CENTER`.

## Name & ID Layout

CGPA Calculator

Name: Zulkar ID: 2121592

	Course	Credit	Grade
Course 1 :	MAT 250 Calculus III	3	B
Course 2 :	CSE 215L Programming Language II Lab	1	B-
Course 3 :	ENG 111 Public Speaking	3	B
Course 4 :	MAT 130 Calculus II	3	A-
Course 5 :	CSE 215 Programming Language II	3	B-

Your CGPA :

3.06923076923077

*Name*

*// ui*

```
Label rLabelLabelName = new Label("Name: ");
Label rLabelValueName = new Label(rStrName);
Label rLabelLabelID = new Label("ID: ");
Label rLabelValueID = new Label(rStrID);
```

*// layout*

```
HBox rHboxNameIdInfo = new HBox(HBOX_GAP, rLabelLabelName, rLabelValueName,
rLabelLabelID, rLabelValueID);
rHboxNameIdInfo.setAlignment(Pos.CENTER);
```

Two labels are created for label “Name:” and “ID:” and two labels will contain the value of user input name and id. Then all four label will be added to a `HBox` layout with gap between each label `HBOX_GAP` which is 30. `HBox` layout will add name label, name, id label, id in order. All labels will be centered in the layout using `setAlignment` method with the argument `Pos.CENTER`.

## Course Title Layout

Course	Credit	Grade
Course 1 : MAT 250 Calculus III	3	B
Course 2 : CSE 215L Programming Language II Lab	1	B-
Course 3 : ENG 111 Public Speaking	3	B
Course 4 : MAT 130 Calculus II	3	A-
Course 5 : CSE 215 Programming Language II	3	B-

Your CGPA : 3.06923076923077

*course title*

*// ui*

```
Label rHeaderSubject = new Label();
```

```
Label[] rSubject = new Label[5];
```

```
for(int i=0; i<strInfo.length; i++){  
    rSubject[i] = new Label("Course " + (i+1) + " : ");  
    // codes .....  
}
```

*// layout*

```
VBox rVboxSubject = new VBox(VBOX_GAP, rHeaderSubject);
```

```
rVboxSubject.getChildren().addAll(rSubject);
```

```
rVboxSubject.setAlignment(Pos.CENTER);
```

This code snippet will create course titles. A course title header with no text is created to match credit and grade layout. A VBox layout is used with 50 px gap between each label. All titles are added in numerical order and aligned center of vertical layout.

## Course Layout

	Course	Credit	Grade
Course 1 :	MAT 250 Calculus III	3	B
Course 2 :	CSE 215L Programming Language II Lab	1	B-
Course 3 :	ENG 111 Public Speaking	3	B
Course 4 :	MAT 130 Calculus II	3	A-
Course 5 :	CSE 215 Programming Language II	3	B-

Your CGPA : 3.06923076923077

*course layout*

*//ui*

```
Label rHeaderCourse = new Label("Course");
Label[] rCourse = new Label[5];
for(int i=0; i<strInfo.length; i++){
    // codes ...
    rCourse[i] = new Label(strInfo[i][0]);
    // codes ...
}
```

*// layout*

```
VBox rVboxCourse = new VBox(VBOX_GAP, rHeaderCourse);
rVboxCourse.getChildren().addAll(rCourse);
rVboxCourse.setAlignment(Pos.CENTER);
```

This code snippet will create course labels. A header label “Course” and 5 labels for selected course items from comboBox is created. A VBox layout is used with 50 px gap between each label. the header label and course labels are added to VBox layout in order. Then all the elements in the layout are aligned in center.

## Credit Layout

	Course	Credit	Grade
Course 1 :	MAT 250 Calculus III	3	B
Course 2 :	CSE 215L Programming Language II Lab	1	B-
Course 3 :	ENG 111 Public Speaking	3	B
Course 4 :	MAT 130 Calculus II	3	A-
Course 5 :	CSE 215 Programming Language II	3	B-

Your CGPA :  
3.06923076923077

### *Credit layout*

*// ui*

```
Label rHeaderCredit = new Label("Credit");
```

```
Label[] rCredit = new Label[5];
```

```
for(int i=0; i<strInfo.length; i++){
```

```
    // codes ...
```

```
    rCredit[i] = new Label(strInfo[i][1]);
```

```
    // codes ...
```

```
}
```

*// layout*

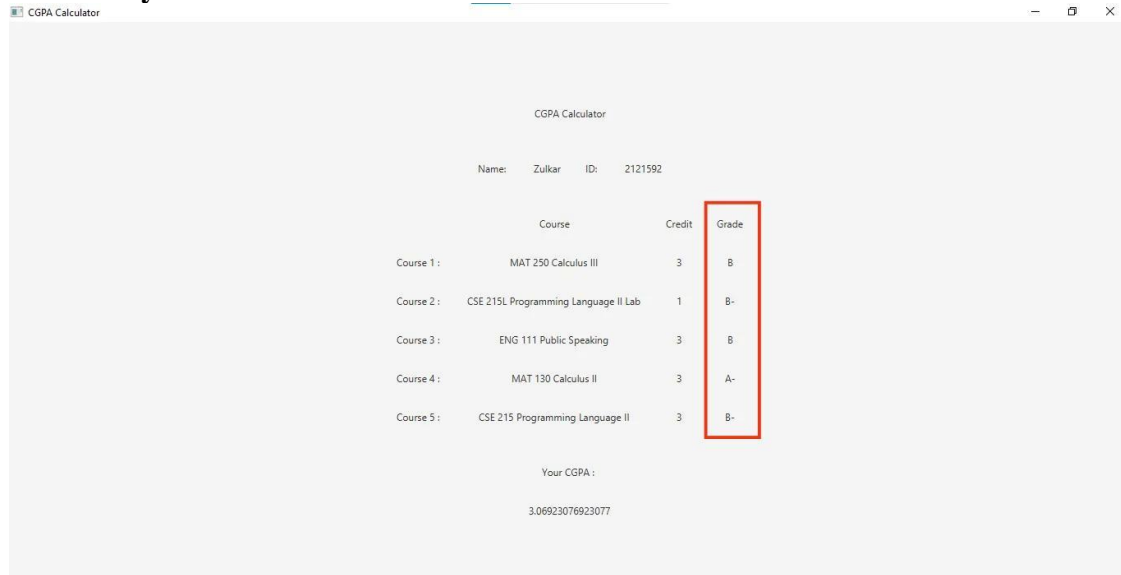

```
VBox rVboxCredit = new VBox(VBOX_GAP, rHeaderCredit);
```

```
rVboxCredit.getChildren().addAll(rCredit);
```

```
rVboxCredit.setAlignment(Pos.CENTER);
```

This code snippet will create credit labels. A header label “Credit” and 5 labels for selected credit items from comboBox is created. A VBox layout is used with 50 px gap between each label. the header label and credit labels are added to VBox layout in order. Then all the elements in the layout are aligned in center.

## Grade Layout

*grade layout*

*// ui*

```
Label rHeaderGrade = new Label("Grade");
```

```
Label[] rGrade = new Label[5];
```

```
for(int i=0; i<strInfo.length; i++){
```

```
    // codes ...
```

```
    rGrade[i] = new Label(strInfo[i][2]);
```

```
}
```

*// layout*

```
VBox rVboxGrade = new VBox(VBOX_GAP, rHeaderGrade);
```

```
rVboxGrade.getChildren().addAll(rGrade);
```

```
rVboxGrade.setAlignment(Pos.CENTER);
```

This code snippet will create grade labels. A header label “Grade” and 5 labels for selected course items from combobox is created. A VBox layout is used with 50 px gap between each label. the header label and grade labels are added to VBox layout in order. Then all the elements in the layout are aligned in center.

## CGPA Layout

	Course	Credit	Grade
Course 1 :	MAT 250 Calculus III	3	B
Course 2 :	CSE 215L Programming Language II Lab	1	B-
Course 3 :	ENG 111 Public Speaking	3	B
Course 4 :	MAT 130 Calculus II	3	A-
Course 5 :	CSE 215 Programming Language II	3	B-

Your CGPA :  
3.06923076923077

*cgpa layout*

*// ui*

```
Label rLabelCgpa = new Label("Your CGPA : ");  
Label rValueCgpa = new Label(String.valueOf(rCGPA));
```

*// layout*

```
HBox rHboxLabelCgpa = new HBox(HBOX_GAP, rLabelCgpa);  
rHboxLabelCgpa.setAlignment(Pos.CENTER);
```

```
HBox rHboxValueCgpa = new HBox(HBOX_GAP, rValueCgpa);  
rHboxValueCgpa.setAlignment(Pos.CENTER);
```

```
VBox rVboxCgpaInfo = new VBox(VBOX_GAP, rHboxLabelCgpa, rHboxValueCgpa);  
rVboxCgpaInfo.setAlignment(Pos.CENTER);
```

This code snippet is for CGPA. A label for “Your CGPA:” and A label for calculated CGPA is created. Two HBox layout will contain each labels and a VBox layout will contain both HBox in order.

## Course Info Layout

	Course	Credit	Grade
Course 1 :	MAT 250 Calculus III	3	B
Course 2 :	CSE 215L Programming Language II Lab	1	B-
Course 3 :	ENG 111 Public Speaking	3	B
Course 4 :	MAT 130 Calculus II	3	A-
Course 5 :	CSE 215 Programming Language II	3	B-

Your CGPA :  
3.06923076923077

### *course info*

```
HBox rHboxCourseInfo = new HBox(HBOX_GAP, rVboxSubject, rVboxCourse, rVboxCredit,  
rVboxGrade);  
rHboxCourseInfo.setAlignment(Pos.CENTER);
```

All the vertical column layouts will be added to a HBox layout with 30 px gap between each elements. Every elements are then aligned in center.

## Final Layout

CGPA Calculator

Name: Zulkar ID: 2121592

	Course	Credit	Grade
Course 1 :	MAT 250 Calculus III	3	B
Course 2 :	CSE 215L Programming Language II Lab	1	B-
Course 3 :	ENG 111 Public Speaking	3	B
Course 4 :	MAT 130 Calculus II	3	A-
Course 5 :	CSE 215 Programming Language II	3	B-

Your CGPA :  
3.06923076923077

### *final layout*

```
VBox rFinalLayout = new VBox(VBOX_GAP, rHboxHeader, rHboxNameIdInfo,  
rHboxCourseInfo, rVboxCgpaInfo);  
rFinalLayout.setAlignment(Pos.CENTER);
```

All the layouts that has been created so far will be added to the final layout.

### **Creating Scene and adding final layout to the scene**

```
Scene scene = new Scene(rFinalLayout, SCENE_WIDTH, SCENE_HEIGHT);
```

A 1200x700 scene is created with the final layout.

### **Adding Scene to Stage**

```
stage.setScene(scene);  
stage.setTitle("CGPA Calculator");  
stage.show();
```

The scene is added to the main stage. The title of the stage is set to “CGPA Calculator”.  
stage.show() method will show the stage on the window.
